

Instant Field Concatenation

By Mark McEver

Configure Instant Field Concatenation

For this module, concatenation means to combine multiple fields.

Note that this module will only concatenate for text or note boxes.

Once this module has been enabled configuration is done on the external module page.

Configure Module: Instant Field Concatenation

Project Settings	Value
1. Concatenated Field: <div>+</div>	
1. Destination Field: <small>* must provide value</small>	<div>full_name - Full Name</div>
1.1. Source Fields (in order): <small>* must provide value</small>	<div>first_name - First Name</div>
1.2. Source Fields (in order): <small>* must provide value</small>	<div>last_name - Last Name</div>
1. Put Spaces Between the Items?: <input checked="" type="checkbox"/>	
2. Concatenated Field: <div>+</div> <div>-</div>	
2. Destination Field: <small>* must provide value</small>	<div></div>
2.1. Source Fields (in order): <small>* must provide value</small>	<div></div>
2. Put Spaces Between the Items?: <input type="checkbox"/>

The base configuration for this module starts with a single concatenated configuration. To add a new ones simply select the plus sign at the top. If you want to remove configurations simply, select the minus button.

Steps to configure module:

1. Select the destination field. This is a drop down list of all the fields in the project. You will need to select either a text field or paragraph box for this.

1. Destination Field:
* must provide value

full_name - Full Name

2. Select the fields that you would like to be concatenated. Here you can also add or remove fields from the concatenation by using the plus and minus buttons.

1.1. Source Fields (in order):	first_name - First Name	+ -
* must provide value		
1.2. Source Fields (in order):	last_name - Last Name	+ -
* must provide value		

3. Select if there should be spaces between the field values.

1. Put Spaces Between the Items?: ☒

Example of Module after configuration:

+ Adding new Record ID 4	
Record ID	4
First Name	<input type="text" value="John"/>
Last Name	<input type="text" value="Doe"/>
Full Name	<input type="text" value="John Doe"/>
